PROFILE

Motivated Data Science graduate with over a year of hands-on, practical experience in machine learning, data analysis, and applied AI through self-driven and academic projects. Skilled in building end-to-end data pipelines, predictive models, and analytics dashboards using Python, Excel, and Power BI. Strong communicator and quick learner with solid problem-solving and leadership skills, seeking an entry-level Data Analyst role to apply and grow technical expertise.

WORK EXPERIENCE

AI/ML Project — Earthquake Risk Prediction & Early Warning Analysis *Jan 2025 – Jun 2025*

Independent Data Analytics & Machine Learning Project

- **Analyzed a global earthquake dataset spanning 1990–2023**, covering magnitude, depth, location, and frequency, to uncover seismic patterns and identify high-risk zones.
- **Cleaned, structured, and engineered features** from large-scale geospatial and seismic data to prepare it for predictive modeling.
- **Built and evaluated machine learning models in Python** (using libraries such as pandas, NumPy, and scikit-learn) to estimate earthquake risk levels based on magnitude-depth correlations.
- **Developed logic for real-time risk analysis and early-warning support**, including a tsunami-risk indicator derived from seismic depth and magnitude thresholds.
- **Created visualizations of seismic trends and risk concentration** to make findings interpretable for non-technical stakeholders.
- **Strengthened practical skills in data wrangling, statistical analysis, and model evaluation**, translating raw scientific data into actionable risk insights.

Smart Travel Companion App — Safety & Budget Recommendation System *Jul 2025 – Dec 2025*

Independent Data Analytics & Application Development Project

- **Designed and developed a smart travel companion application** aimed at solo travelers and budget-conscious users.
- **Built a budget-based recommendation engine** to suggest affordable hotels and food options aligned with user spending limits and preferences.
- **Implemented a safety-analysis module using sentiment analysis** on location and review data to flag safer routes, neighborhoods, and accommodations.
- **Integrated offline map access, voice-alert notifications, and emergency-assistance features** to support travelers in low-connectivity environments.
- **Applied AI/ML and data analytics techniques** to power route recommendations, balancing safety, cost, and convenience for end users.
- **Managed the project end-to-end** — from data collection and processing to feature design and integration — gaining practical exposure to the full analytics-to-application workflow.

EDUCATION

Bachelor's Degree in Data Science

2023 – 2026

Kumaraguru College of Liberal Arts and Science, Coimbatore

Completed a Bachelor's degree in Data Science, building a strong foundation in statistics, machine learning, data analysis, and programming.

SKILLS

Data Analysis • Excel • Power BI • Python • Machine Learning • Problem Solving • Communication • Leadership
